784 keeper or owner of a herd, his property would also suffer from this infraction of custom (2). /411/

2. His cows would bear only male calves.

A husband may not use this kitchen utensil to beat his wife! He would risk the loss of his life.

The failure to observe most of the prescribed customs while celebrating a wedding would make the parents of the two partners liable to illness or death.

[551] When asked what their name is, children, young men, and girls either do not answer or give a false name, for fear that the stranger may cast an evil spell upon them and thus prevent them from growing.

[841] A woman in her menses may not enter a hut where there is a newborn child, lest she cause the baby to contract scabies. Hence [751] the custom of placing a copper-thread bracelet (urunyerere, or urwinjiri) about the neck of babies as a talisman and preventive.

[643] The king must never bend his knees, in order not to expose his kingdom to becoming smaller.

A father may not step over the hide that serves as a portable cradle (ingobyi) for his child, nor may a son step over his mother's belt.

A woman may not step over a spear, milk a cow, repair the roof of a hut, imitate (!) the cry of a rooster, etc.

It is forbidden to sit on a food basket.

When it thunders, one may not smoke a pipe when seated on a chair.

No one may rest on a sheepskin, or he will contract scabies (ngo badahumana). There is danger of death involved in carrying a whetting stone (ityazo) into someone else's house.

[825 777] It is expressly forbidden to kill certain birds and certain reptiles, not only because they are totem but also because they are regarded either as good luck for the land, like the wagtail (inyamanza), or as bad luck, like the scaly anteater, whose dead body might draw great misfortunes upon the territory. /412/

754 and cite numerous examples to this effect. On the other hand, the ingredients used in their manufacture are not yet sufficiently known.

754 278 At best, one hears popular rumors of snakes, toads, human cadavers (imirundi y' abapfuye, n' ingobyi z' abana), crocodiles, etc., whose putrefied flesh was used. The Blacks are also convinced that the lungs of tuberculars are used to transmit the disease to other [164] people (1).

1. This illness is widespread among the Batutsi, who greatly fear it.

They know full well that it is fatal. Hence their great [578] curse, "May you die of tuberculosis!" (uragichwa n' igituntu).

According to popular belief, those lungs are dried out and crushed to powder so as to be slipped more easily into the drinking tube which is used to drink native beer. Menstrual blood (irungu), [84] which inspires in them an intense fear and an acute aversion, is popularly believed to cause slow poisoning when administered to an enemy. It is mixed in with his food secretly. There is also mention of poisonous juices, such as the milk of various kinds of euphorbia [824 847] (imiyenzi, imiduha, etc.) and of certain other plants, for example, muhoko, which is also used to induce abortions. Cactus milk and muhoko juice could only induce death in such quantities that the person involved would not fail to detect them while drinking. It is difficult, therefore, to make frequent use of those substances.

278 824 The Banyarwanda also regard as toxic /488/ the following plants: urwizilinga, umutambasha, and igisura. As we mentioned earlier, urwizilinga is a shrub somewhat similar to datura. It is the plant whose juice or powdered bark is used in trials by ordeal. The umutambasha is another shrub whose leaves are crushed to extract [224] the juice. The Banyarwanda use it to kill rats by mixing it with the food that is used as bait for those rodents.

585 her husband, and there is a quarrel. It is proper for the man to show marks on his body which indicate to everyone that his wife bravely defended herself and did not yield like a hussy. However, the man may not be strong enough to break the wife's resistance with force, and he must then persuade her with presents to eat and to yield to him.

After the marriage, the woman must remain hidden for a time, that is, until her relatives come with gifts of beer, food, and bracelets. This visit usually takes place on the third day. On this occasion mats are brought along which the young wife made at home. She may chat with her relatives, the young girls who brought the mats. On this day there is dancing, singing, and much drinking.

Some time afterwards the parents again send their daughter presents. Among these, besides food, is a brand new hoe with a new handle. On this day the wife dances with her husband and the new hoe while the rest of the relatives sing an accompaniment. The wife then goes to the field for the first time and works a little. Until this day, called kushishura, the man has no sexual intercourse with his other wives. After the hoeing, grains of millet [842] are brought to the young woman. A handful is scattered on a mat, and she must pick them up with one sweep of her hand. If she fails, the prospects of numerous progeny are poor. She and her husband together grind these grains and use the flour to make beer which they give to small children in order that they themselves will have children.

841 [224] During the first menstrual period after her marriage, 291 the woman is given the cowhide which constitutes the dress of 302 married women, and her head is shaved. However, since girls are 585 not infrequently married before they are mature, it often happens that the wife goes about with her masunzu (shaved pattern) for a long time, waiting for the cowhide. Father F. Dufays told me that he knows of a case where a wife waited eight months for her cowhide, but it is said that the wife sometimes waits as long as two years.

841 Thus, a superstitition has arisen about the shaved pattern on 302 the head. According to it, if a wife does not give up her maiden 585

841 adornment at the proper time (first menstrual period after marriage), one of the partners will die young. After her head has been shaved the wife receives gifts from her husband.

When the woman has put on her cowhide, she pays her parents a visit. It sometimes happens that if the menstrual period is early this visit precedes the gift of the first hoe. On the way to her parents she has her head wrapped in the skin and is wearing her best jewelry. At her parents' house she grinds flour and fills a basket, piling it high. She removes as much as is piled over the edge of the basket and takes this to her husband. It is cooked to a stiff mush, and husband and wife eat it together. This ceremony is also supposed to guarantee numerous descendants.

Children are prominent in the family. The parents love them tenderly and treat them well. Although the intimate relationship between mother and child excludes the father somewhat, nevertheless the husband and wife show a certain attachment and tenderness toward one another. This is said to be true particularly of the Batutsi.

In Mulera, when a man goes on a journey, his wife pours off a little beer from each jug used and puts it aside. If the man returns and finds no beer, he concludes that his wife has not thought of him and has been unfaithful to him.

In Nduga, as we have mentioned before, marriages are of only moderate duration.

The Mulera wedding has been beautifully and completely described by Father Felix Dufays (1), and the marriage customs in other parts of Ruanda were discussed by Father P. Schumacher.(2)

later on—adds still further to its interest. There was a very elaborate series of prescriptions and taboos concerning the care of cattle, and a very full terminology which took into account the differences in colour of skin, in shape and length of horns, and in origin of possession or ownership, &c.[21] According to experts, Ruanda empirical knowledge of cattle-rearing was quite good.

In this field there was a very strict division of labour by sex. Cattle could be cared for only by men. This restriction was based on magical beliefs regarding impurity, as females before puberty and after menopause were permitted to take care of the livestock. The strictest prohibitions were on women in their menstruating periods. Hutu were not excluded from cattle rearing, and in fact most of the menial tasks were performed by Hutu servants or clients.

The Tutsi were not nomadic pastoralists. Cattle moved according to the seasons from valleys to hills, but usually in the same area. It might happen, however, that when the drought was particularly severe herds had to be led to another area which might be some distance away. But this did not imply any change of residence for the owners of the cattle which were accompanied only by shepherds.

When in October grass began to grow again, the cows were lean and starving. As they recovered strength on new grass, their milk came back. In November rains were sufficient to allow grazing on the hills. Flies were myriad in December. Then the short dry season began. In January, however, there was still too much water in the valleys for cattle to pasture there, and they stayed in kraals, near huts. In February and March they went out again on to the hills. With the rains flies came again. Milk output increased. In April pastures reserved for the dry season were closed. At the beginning of the dry season (end of May, beginning of June) milk diminished as the grass dried up, and grazing was confined to the valleys. July was not a bad month because cows could pasture on the harvested fields. Flies disappeared in the dry season. August and September were the two worst months for cattle.[22]

Sheep and goats were also kept for their skin and their milk. The Hutu ate goat-flesh but mutton was ritually forbidden. Even today it arouses a very marked repugnance and only the shameless Twa will eat it.
